Terua

1 Pentru uruatoarele v.a. construiti estimatorii dati de metode monantelor si respective metoda verosimilitàti maxime, apoi cercetati calitatile acestora (medeplasare, consistență, eficiența). Acolo unde se obține estimatori diferiți precizati pe care il preferați si de ce. Cercetate comportamentel asimptotic al estimatorilor obținuiti.

a)
$$f(x) = e^{-2\theta} \cdot \frac{(2\theta)^x}{x!}$$
, $x \in \mathbb{N}$, $\frac{\theta \in \mathbb{R}}{x!}$

a)
$$f(x) = e$$

$$= e$$

$$\neq 1$$

$$e$$

$$f(x) = C_m p^{x} (1-p)^{n-x}, n \in \mathbb{A}^{+}, x \in \{0,1,\dots,m\}, p \in (0,1)$$

$$= e$$

c)
$$f_2(x) = \frac{x^2}{2\lambda^3} \cdot e^{-\frac{x^2}{2}} \cdot 1_{(0,\infty)}, \frac{2>0}{2}$$

d)
$$f_{\theta}(x) = \theta(1-\theta)^{2}, x \in \mathbb{N}, \theta \in (0,1)$$

d)
$$f(x) = \theta(1-\theta)^{x}$$
, $x \in \mathbb{N}$, $\frac{\theta \in (0,1)}{\theta}$
e) $f(x) = \frac{x^{\alpha-1} \cdot e^{-\frac{x}{\theta}}}{\Gamma(x) \cdot \theta^{\alpha}} \cdot II(0,\infty)$, $\frac{\theta > 0}{\theta}$, $\frac{x > 0}{\theta}$ curves with $\frac{2\theta - 1}{\theta}$

$$f) = \frac{1}{1-\theta} \cdot \frac{1}{1-\theta} \cdot$$

$$f) f_{\theta}(x) = \frac{1}{1-\theta} \cdot x$$

$$g) f_{\theta}(x) = \frac{\alpha \cdot \theta^{\alpha}}{x^{\alpha+1}} \cdot \mathcal{I}_{(\theta, \infty)}, \frac{\theta}{\theta}, \frac{\theta}{\theta}, \frac{\theta}{\theta}, \frac{\theta}{\theta}$$

$$f_{\theta}(x) = \frac{\alpha \cdot \theta^{\alpha}}{x^{\alpha+1}} \cdot \mathcal{I}_{(\theta, \infty)}, \frac{\theta}{\theta}, \frac{\theta}{\theta}, \frac{\theta}{\theta}$$

$$f(x) = \frac{5+5}{26} \cdot 1/(6, \infty), \xrightarrow{\phi > 0}$$

i)
$$f_{\theta}(x) = \frac{\theta^{2}}{(\theta+1)^{2}+1}, x \in \mathbb{X}, \theta > 0$$

$$-\frac{x^{2}}{\theta}. 1/(0, \infty)$$

$$i) f_{\Phi}(x) = \frac{\Phi}{(\Phi+1)^{\alpha+1}}, \quad \chi(0, \infty), \quad \frac{\Phi}{\Phi} = 0$$

$$j) f_{\Phi}(x) = \frac{2}{\Phi} \cdot x \cdot e^{-\frac{x^2}{\Phi}} \cdot 1/(0, \infty), \quad \frac{\Phi}{\Phi} = 0$$

$$i) f_{\Phi}(x) = \frac{2}{\Phi} \cdot x \cdot e^{-\frac{x^2}{\Phi}} \cdot 1/(0, \infty)$$

$$j) f_{\Phi}(x) = \frac{2}{\Phi} \cdot x \cdot e^{-\frac{x^{2}}{\Phi}} \cdot 1/(0, \infty), \xrightarrow{\Phi} 0$$

$$j) f_{\Phi}(x) = \frac{2}{\Phi} \cdot x \cdot e^{-\frac{x^{2}}{\Phi}} \cdot 1/(0, \infty), \xrightarrow{\Phi} 0, \xrightarrow{L} 0 \text{ curves cut}$$

$$h) f_{\Phi}(x) = \frac{2}{\Phi} \cdot x \cdot e^{-\frac{x^{2}}{\Phi}} \cdot 1/(0, \infty), \xrightarrow{\Phi} 0, \xrightarrow{L} 0 \text{ curves cut}$$

$$\ell) f_{\theta,m}(x) = \frac{\theta}{\sqrt{\pi}} \cdot e^{-\frac{\theta^2 \cdot (x-m)^2}{\pi}}, \underline{m \in \mathbb{R}}, \underline{\theta} > 0$$

me)
$$f_{\theta_1,\theta_2}(x) = \frac{1}{\theta_2^{\theta_1,\Gamma(\theta_1)}} \cdot x^{\theta_1-1} \cdot e^{-\frac{x}{\theta_2}} \cdot 1/(0,\infty) \rightarrow \frac{\theta_1,\theta_2}{1} \rightarrow 0$$

$$(1) \int_{\mathcal{H},\lambda} (x) = \left(\frac{2}{2\pi x^3}\right)^{1/2} e^{-\frac{2(x-\mu)^2}{2\mu^2 x}} \cdot \mathcal{H}_{(0,\infty)} , \underline{\mathcal{H}} \in \mathbb{R}, \underline{2>0}$$

o)
$$f_{\alpha\beta}(x) = \frac{1}{\beta} \cdot e^{-\frac{1}{\beta} \cdot (x-\alpha)}$$
 $f_{\alpha\beta}(x) = \frac{1}{\beta} \cdot e^{-\frac{1}{\beta} \cdot (x-\alpha)}$
 $f_{\alpha\beta}(x) = \frac{1}{\beta} \cdot e^{-\frac{1}{\beta} \cdot (x-\alpha)}$

In contextul o) gasiti estimatorul de verosimilitate maxima pentru $P(X \ge 1)$.

- 2 Fie X o v.a. definité prin ence den urmatourele densitati: $f_{\Phi}(x) = 1_{(0,1)}$ pt. $\Phi = 0$ si $f_{\Phi}(x) = \frac{1}{2\sqrt{x}} \cdot 1_{(0,1)}$ pentrue $\Phi = 1$. Determinate estimatornel de verosimilétate maxima pentru E.
- 3 Fie X is Y doua w. α . independente an densitatibe: $f_{X}(x) = \frac{1}{\lambda} \cdot e^{-\frac{x}{\lambda}} \cdot 1/(0, \infty) , f_{Y}(y) = \frac{1}{\mu} \cdot e^{-\frac{x}{\mu}} \cdot 1/(0, \infty) ; \frac{2, \mu > 0}{2 = x}$ Le observé v.a. $Z \not \circ W$ au $Z = nuine(X, Y) \not \circ W = \begin{cases} 1, Z = X \\ 0, Z = Y \end{cases}$ $((z_1, w_1), (z_2, w_2) - - (z_n, w_n)$ formează un esantion i.i.d.) Determinati estimatorul de verosinuilitate maxima pentre 2 si M.

The Y_1, Y_2, \dots, Y_m v.a. ce satisfic conditions: $Y_i = \beta \cdot x_i + \mathcal{E}_i$, i = 1, n, unde x_1, x_2, \dots, x_m sunt constante fixate,

iar $\mathcal{E}_1, \mathcal{E}_2, \dots, \mathcal{E}_m \in \mathcal{N} \cup \{0, \nabla^2\}$ i.i.d., ∇^2 neumestert

determinate externatoral de verosimilatate maxima pentru β Determinate repartita acertaia.
